What is Tinea ?

Tinea is a fungal disease of the skin that is caused by a number of different organisms.

Tinea of the feet is usually itchy, particularly between the toes. Tinea is hard to clear up as footwear tends to create a moist environment which is ideal for fungal growth. In fact, Tinea spores can stay in your footwear causing reinfection.

Tinea of the body. (ringworm or tinea corporis.)

Jock itch & ringworm are both tinea infections of the skin. Often occurring in the groin or armpit areas they can be recognized by the red appearance with a very sharp border between the good skin and the infected skin. Tinea infection is often the cause of a deodorant rash that will not heal.

How to treat Tinea for fast relief.

Tinea of the Feet.

To permanently eradicate tinea on the feet you need to do 3 things.

Treat the feet, Do this by applying David's Tinea Cream twice a day. Apply it just before bed and just before putting shoes & socks/ stockings on in the morning. Results will be noticed within 24 hours as an increase in foot comfort and a reduction in any itching.

Treat the footwear to kill any fungal spores that could reinfect you with tinea, This is best done by spraying the inside of the shoes with **"Deo Fresh"** (available from David Hosking's pharmacy.) Use once each night for 1 week then use once a week as needed.

"Deo Fresh" contains alcohol & formalin to rapidly kill fungi in footwear that reinfect your feet with tinea. It also completely destroys foot odor. Excellent for runners, work boots & children's shoes to prevent foot odor too.

Treat the shower/bathing areas at home to prevent reinfection from wet areas in the house. This is simply done by splashing a cup full of **"White King"** or similar chlorine bleach around the bath/shower recess and leaving overnight to kill any bacteria & fungi in the bathing areas.

Tinea on the Body can simply be treated by applying David's Tinea Cream twice a day until all sign of rash has gone.

Why David's Tinea Cream Is so effective.

Most Tinea Creams only contain one active ingredient,

Most commonly anti-fungals such as Miconazole, Clotrimazole, Econazole and sometimes Nystatin are used.

Sadly Fungi are becoming resistant to these antifungals and many people find their tinea is very hard to get rid of.

The formulation of David's Tinea Cream contains 2 active antiseptic agents to kill fungi & bacteria along with a keratolytic agent & a penetrating base to help the antiseptics to penetrate the skin more effectively. David's Tinea Cream contains absolutely no water because keeping the foot area as dry as possible helps destroy Tinea.

CAUTION

David's Tinea Cream is quite greasy and can make your feet a bit slippery. To avoid problems with slippery feet apply just before going to bed and just before putting on your shoes, socks or stockings in the morning.
